Yash Jain

yashjain200524@gmail.com 9876976958 Yash Jain YashJain2410 Codolio

Skills

Programming and Tools: C++, C, Python, JavaScript, SQL, Git/Github, Docker, MongoDB

Machine Learning: Supervised and Unsupervised Learning, Neural Networks, CNN, RNN, NLP, Computer Vision, Hyperparameter Tuning, Kubernetes, MLflow, CI/CD, MLOps, REST APIs

Frameworks and Libraries: TensorFlow, PyTorch, scikit-learn, Node.js, Express.js, LangChain, FastAPI

GenAI Frameworks: LLMs, RAG, Prompt Engnineering, Vector DBs, AWS, Fine-tuning, Transformers

Projects

AI Voice Interview Platform | *FastAPI, Docker, Whisper, MCP, RAG* *github*

- Built an interview system using **WebRTC, WebSockets, and Voice Activity Detection (VAD)**, enabling sub-second conversational latency and managing 1 full-duplex live audio pipeline per session.
- Designed a **multi-LLM orchestration** layer integrating 2+ LLM providers (Gemini and Hugging Face) with parallel execution and fallback routing.
- Architected an **MCP**-based AI system with 3 context servers **(Interview, RAG, Evaluation)** and a rubric-driven LLM scoring engine evaluating 4 dimensions, **FAISS-based RAG** to generate targeted follow-up questions aligned with candidate background.

CodeSage - Topology-Aware Codebase Intelligence Platform | *LangGraph, tree-sitter, NetworkX, Qdrant, UniXcoder* *github*

- Built an end-to-end Developer AI Assistant using **LangGraph, LangSmith, tree-sitter, and RAG,** capable of parsing repositories into AST-based call graphs and generating context-aware codebase answers.
- Designed an **intent-classified hybrid retrieval** system combining **BM25, dense vector search, and graph-based context expansion**, achieving ~41% higher answer faithfulness compared to traditional text-chunking approaches
- Implemented a production-ready MLOps pipeline with **RAGAS-based evaluation gates**, custom code quality metrics, **Prometheus/Grafana** monitoring, and **Railway** deployment

AI Image Generation Platform | *FastAPI, Docker, AWS S3, Stable Diffusion, IP Adapter, Vercel, Render, Fal.ai, Replicate* *github*

- Built a **Dockerized AI image generation platform using FastAPI with image-based style transfer**, to generate consistent product visuals with controllable accuracy and variation.
- Designed a **model- and provider-agnostic architecture** supporting 3+ AI providers **(FAL.ai, Replicate, Hugging Face)** and multiple **diffusion models (SDXL, Flux)**
- Deployed the system on **Render and Vercel with AWS S3**-based image storage.

Education

KIET Group of Institutions, Ghaziabad *2023 – 2027*
B.Tech in Computer Science *CGPA: 7.5/10*

Experience

Software Engineering Intern *India*
Dokaai *April 2025 – June 2025*

- Implemented scalable REST APIs using **Node.js and Express.js**, enhancing backend performance 30%.
- Developed JWT-based authentication for 5+ user roles, reducing unauthorized access by 95%.
- Conducted rigorous unit and integration testing using Postman, reducing production bugs by 40%.

Achievements and Certifications

- **Competitive Programming -** 1577 rating on Leetcode
- **Hackathon Win -** 1st Runner up of Hack Genesis Hackathon at Christ Univeristy, Ghaziabad
